**(Department of Computer Science)**

# INDEX

| S.No | Program Description                           | Remarks   |
|------|-----------------------------------------------|-----------|
| 1    | Subtraction and Multiplication of Two Numbers | Completed |
| 2    | Marks Sum and Aggregate Percentage            | Completed |
| 3    | Factorial Using Iterative Loop                | Completed |
| 4    | Classroom Student Average Calculation         | Completed |
| 5    | Counter Loop from 234 to 898                  | Completed |

# Program 1: Basic Arithmetic

**Objective:** Write a C program to perform subtraction and multiplication of two numbers.

```
#include <stdio.h>

int main() {
    int a, b;

    printf("Enter two numbers: ");
    scanf("%d %d", &a, &b);

    printf("Subtraction = %d\n", a - b);
    printf("Multiplication = %d\n", a * b);

    return 0;
}
```

## Console Output:

```
Enter two numbers: 10 5
Subtraction = 5
Multiplication = 50
```

## Program 2: Sum & Percentage

**Objective:** Write a C program to input marks of 5 subjects and calculate total and percentage.

```
#include <stdio.h>

int main() {
    int m1, m2, m3, m4, m5, total;
    float percentage;

    printf("Enter marks of 5 subjects: ");
    scanf("%d %d %d %d %d", &m1, &m2, &m3, &m4, &m5);

    total = m1 + m2 + m3 + m4 + m5;
    percentage = total / 5.0;

    printf("Total = %d\n", total);
    printf("Percentage = %.2f\n", percentage);

    return 0;
}
```

### Console Output:

```
Enter marks: 70 80 75 90 85
Total = 400
Percentage = 80.00
```

## Program 3: Factorial

**Objective:** Write a C program to find factorial using loop.

```
#include <stdio.h>

int main() {
    int n, i;
    long long fact = 1;

    printf("Enter number: ");
    scanf("%d", &n);

    for(i = 1; i <= n; i++) {
        fact *= i;
    }

    printf("Factorial = %lld\n", fact);

    return 0;
}
```

### Console Output:

```
Enter number: 5
Factorial = 120
```
